Professional Profile

As an undergraduate scholar in Computer Science and Engineering (B.Tech, Expected 2027) and a Certified ServiceNow System Administrator, the candidate combines profound technical depth in artificial intelligence with a venture-focused product mindset. The candidate demonstrates a proven capacity to operate across the entire product lifecycle—from identifying real-world operational bottlenecks to architecting data-driven solutions, shipping functional prototypes, and leading cross-functional engineering teams. Possessing strong foundations in Python, SQL, and predictive modeling, paired with formal product management training, the candidate is uniquely positioned to leverage this technical depth to build, scale, and lead technology ventures that address complex enterprise and consumer challenges.

Entrepreneurial Focus and Product Ownership

The candidate operates fundamentally within a builder ecosystem, having independently conceptualized, architected, and shipped multiple full-stack data products (including BloodBridge, Guidora, Raahi, and a newly deployed Predictive Maintenance Dashboard). These platforms directly address critical gaps in healthcare logistics, education access, public transit, and industrial automation. This technical execution is augmented by formal Product Management certification, establishing robust frameworks for user acquisition, product-market fit, and agile delivery. Furthermore, the candidate exhibits significant leadership under pressure, having directed cross-functional engineering teams through rigorous build cycles to successfully deliver a high-accuracy Deepfake Detection System ahead of strict internal deadlines. This demonstrates a capability for full-stack accountability, encompassing backend architecture, data pipeline engineering, machine learning model deployment, and frontend integration.

Core Technical Competencies

Competency Domain	Technologies, Frameworks, and Methodologies
Artificial Intelligence & Machine Learning	Python, Scikit-learn, TensorFlow, PyTorch, Natural Language Processing (NLP), Deep Learning, Predictive Modelling, Feature Engineering.
Data Architecture & Analytics	SQL, Pandas, NumPy, Matplotlib, Seaborn, InfluxDB, Grafana, Jupyter Notebook, Google Colab.
Enterprise Platforms & Infrastructure	ServiceNow (CSA Certified, CAD Focus, Flow Designer, Business Rules), RESTful APIs, Google Cloud Platform (GCP).
Software Engineering & Languages	Java, JavaScript, C++, Leaflet.js, Agile/Scrum Methodologies, Git/GitHub Version Control.
Business & Venture Leadership	Product Management, Cross-functional Team Leadership, Technical Stakeholder Management, Rapid Prototyping, SLA Compliance.

Professional Experience

Role and Organization	Tenure	Strategic Impact and Technical Execution
AI Automation & Infrastructure Intern IntrnForte	Mar 2026 – May 2026	Monitored critical AI infrastructure, resolving complex technical anomalies to consistently maintain SLA-compliant system uptime across deployment pipelines. Architected and deployed automated Python scripts for routine operational workflows, significantly reducing manual intervention and operational latency across the organization.
ServiceNow Trainee (CSA & CAD Focus) ServiceNow (RiseUp Program)	Jun 2025 – Sep 2025	Engineered three complex scoped applications utilizing Flow Designer and Business Rules, successfully automating disparate enterprise workflows and eliminating manual data entry bottlenecks across departments. Optimised client-side scripts and UI policies, achieving a 27% reduction in process latency and enhancing end-user experience. Collaborated within an 8-person agile development team to maintain 99% system uptime; successfully earned the globally recognized CSA certification within a strict 3-month acceleration timeline.

Technical Team Lead & Backend Developer Smart India Hackathon (Internal)	Sep 2024 – Sep 2025	Led a 5-member cross-functional engineering team to develop a Deepfake Detection System achieving 92% accuracy, synthesizing deep learning algorithms with digital forensics logic for real-time media integrity verification. Architected a highly scalable REST API backend with heavily optimized SQL queries, reducing data retrieval time by 40% and successfully handling 1,000+ concurrent requests with zero system downtime during live demonstrations. Executed complete agile sprint planning, delivering the fully functional prototype two weeks ahead of the
Role and Organization	Tenure	Strategic Impact and Technical Execution
		internal institutional deadline.
Student Coordinator – Logistics & Liaison Placement Cell, Gautam Buddha University	Aug 2025	Operated as the primary liaison bridging corporate recruiters and the student body, streamlining communication and improving response efficiency metrics by 80%. Managed the logistical processing of 200+ applicant profiles and orchestrated large-scale, high-volume campus recruitment drives.

AI/ML Intern IntrnForte AI & ML Training Platform	Feb 2024 – May 2024	Developed a high-precision Breast Cancer Prediction Model leveraging Python, Scikit-learn, and Pandas, achieving 92% diagnostic precision on a complex validation dataset of 10,000+ patient records. Executed the end-to-end machine learning lifecycle: data cleaning, exploratory data analysis, feature engineering, model training, and the final deployment of the diagnostic tool. Applied advanced predictive modeling and data visualization techniques directly adaptable to adjacent commercial verticals including demand forecasting and industrial defect detection.

Independent Ventures and Deployed Projects

Venture Name	Platform Link	Technical Architecture and Market Impact
PDM	pdm-dashboar	Designed and deployed a comprehensive Predictive Maintenance (PdM) dashboard intended to monitor

Venture Name	Platform Link	Technical Architecture and Market Impact
--------------	---------------	--

Dashboard	d.netlify.app	machinery health, detect anomalies, and visualize sensor data in real-time. This project demonstrates the integration of machine learning techniques with IoT-style data streams, providing actionable enterprise intelligence to preempt equipment failure and optimize maintenance schedules in alignment with Industry 4.0 paradigms.
BloodBridge	Self-Directed	Architected a sophisticated ServiceNow application utilizing advanced Business Rules to trigger location-specific and blood-type-specific instant notifications during medical emergencies. Streamlined the healthcare logistics supply chain, ultimately reducing average donor response time by a measurable 30%.
Guidora	Self-Directed	Built a centralized, data-driven dashboard aggregating and comparing metrics from 100+ academic institutions and scholarship programs. Engineered a dynamic scholarship-tracking feature that successfully assisted over 1,000 students in identifying and securing vital educational funding opportunities.
Raahi	Self-Directed	Developed a real-time transit tracking solution leveraging Leaflet.js and live REST APIs to optimize commute predictability. Scaled the platform architecture to seamlessly serve 15,000 daily active users across various small urban sectors, significantly improving localized transit intelligence and maintaining strict data feed consistency.

Academic Foundations and Certifications

Institution / Program	Degree / Certification	Timeline
Gautam Buddha University, Greater Noida, UP	B.Tech in Computer Science & Engineering (Machine Learning Specialization)	Jul 2023 – May 2027 (Expected)
RiseUp with ServiceNow	ServiceNow Certified System Administrator (CSA)	2025
ServiceNow	ServiceNow Certified Application Developer (CAD)	In Progress
IntrnForte	AI/ML Engineering Certification	2024
Udemy	Product Management Fundamentals	2024
